

Language regards and child-directed speech

Colloquial Belgian Dutch in Flemish households

Eline Zenner, Dorien Van de Mieroop & Stefania Marzo

Overview

1. Child-directed speech and sociolinguistic awareness
2. Colloquial Belgian Dutch
3. Data
4. Variationist perspectives
5. Discourse analytic insights
6. Conclusion

CDS

Acquired insights

Parents adapt their language when talking to their children

- Phonetic contrast
- Utterance length
- Syntactic complexity
- Pitch
- ...

Different reasons to do so

- Analytic function of CDS
- Social function of CDS
- Sociolinguistic awareness

CDS and sociolinguistic awareness

Variation between standard and vernacular forms in CDS

- Less vernacular than parent-to-parent
 - Speech to boys more vernacular than speech to girls
 - Proportion standard language decreases with age children
-
- Help children acquire complete sociolinguistic repertoire
 - When do you use which variety?
 - Insight into parents' language regards

Overview

1. Child-directed speech and sociolinguistic awareness
2. Colloquial Belgian Dutch
3. Data
4. Variationist perspectives
5. Discourse analytic insights
6. Conclusion

Colloquial Belgian Dutch

Flanders:

Delayed standardization

Exonormative orientation

→ CBD:

substandard

supraregional

autonomous

new standard?

CBD as autonomous BD standard?

speaker evaluation

family language

Overview

1. Child-directed speech and sociolinguistic awareness
2. Colloquial Belgian Dutch
3. Data
4. Variationist perspectives
5. Discourse analytic insights
6. Conclusion

Dinner table talk

- one Antwerpian family (from ongoing project with >16 families)
- parents: teachers, 35/39 yrs old
- children: four boys, nine months and 4/5/7 yrs old
 - prelinguistic vs. linguistic
 - preschool vs. school
- data: three hours of self-recordings, 3233 utterances
- transcriptions: CHILDES/Jeffersonian
- context: mealtime
 - interface of power and intimacy
 - “the built-in tension between dinner as an activity and dinner as a social, conversational event” (Blum-Kulka 1997); frames of talk
- sociolinguistic interviews

	CH3	61	18	0.228

- Father more vernacular than mother
- Differentiation between children
- Pattern stronger for father
- CH4?

(p-value < 0.00001, Cramer's V 0.295)

Overview

1. Child-directed speech and sociolinguistic awareness
2. Colloquial Belgian Dutch
3. Data
4. Variationist perspectives
5. Discourse analytic insights
6. Conclusion

Discourse analytic insights

This variation between children is partially expected, and partially surprising: CH4 in the pre-linguistic phase

=> a qualitative exploration of the data is required

Qualitative exploration of surprising difference

Father's CDS to older children:

- dus da(t) mag je zo da(t) mag je me(t) je handjes ete(n) als je da(t) wil
*so you can eat that like that you can eat that with your hands if you like**

Father's CDS to the youngest child in pre-language phase, right after the child had not entirely finished his bottle of milk (of 180 ml):

- al goe(d) da(t) ge geen en twee honderd tien besteld (h)ad e Jaan
*good that you hadn't ordered a two hundred and ten hey Jaan**

*in translation, all SL second person pronominal forms are underlined, all CBD-forms are in blue

Qualitative exploration of surprising difference

Father's CDS to older children:

- dus da(t) mag je zo da(t) mag je me(t) je handjes ete(n) als je da(t) wil
so you can eat that like that you can eat that with your hands if you like

Father's CDS to the youngest child in pre-language phase, right after the child had not entirely finished his bottle of milk (of 180 ml):

- al goe(d) da(t) ge geen en twee honderd tien besteld (h)ad e Jaan
good that you hadn't ordered a two hundred and ten hey Jaan

Perfect illustration of the tension between the instrumental goal and the social goal typical of dinner talk
(Blum-Kulka 1997)

New research question

Perhaps it is not the increasing age of the children beyond the pre-language phase that causes the parents to use more CBD when addressing them, but the type of talk that is used to these children that elicits a different type of language variant?

Discourse analytic insights

Family meals in Western society:

Three typical “types” – or frames – of talk (Brumark 2010):

- **Social/relational:** talk for the sole purpose of talking
- **Instances of pedagogic comments:** teaching the children something
- **Instrumental/transactional:** related to the activity of having dinner

Social/relational frame

- 1 FAT *moest ge morgen uw goed rapport al terug meenemen naar huis*
 'did you have to take your good report back home tomorrow already'
- 2 *(.) a:h naar school bedoel ek of-*
 '(.) a:h to school I mean or'
- 3 *wil je eerst nog es stoefen bij euh*
 'do you first want to brag to erm'
- 4 *want morgen komt opa he*
 'because granddad is coming tomorrow hey'
- 5 CH3 *o:pa*
 'gra:nnddad'

Pedagogical frame

- 1 CH1 *maar welk is eigenlijk 50 plus 50*
‘but what is 50 plus 50 actually ’
- 2 MOT *wat denk je*
‘what do you think’
- 3 CH3 *60*
- 4 CH1 *2 plus 2, 50 plus 50 is 52*
‘2 plus 2, 50 plus 50 is 52’
- 5 MOT *nee 50 plus 2 is 52 (.) 50 plus 50 is 100*
‘no 50 plus 2 is 52 (.) 50 plus 50 is 100’

Instrumental/transactional frame

- 1 MOT *wil jij graag die fruityoghurt*
 'would you like to have that fruit yoghurt'
- 2 FAT *of een boterham met choco*
 'or a sandwich with chocolate spread'
- 3 MOT *met aardbei(.) weer met aardbeie(n)(.) ja*
 'with strawberry (.) again with strawberries (.) yes'
- 4 CH1 *ja*
 'yes'
- 5 MOT okay

Quantitative distribution of SL/CBD-pronouns across the 3 frames

Frame	SL	CBD	prop.CBD
social/relational	139	153	0.524
transactional	398	194	0.328
pedagogical	30	8	0.211

Overall

On the one hand: our data support Foulkes et al's findings (2005) concerning:

- the increase of vernacular features in CDS when children grow older
- the observation that vernacular features are more abundant in fathers' speech than in mothers' speech

On the other hand: these findings only seem to hold:

- for specific types of interaction, namely talk within the relational frame
- for specific interlocutors, namely only the father

Zooming in on the mother's SL/CBD-use

nearly exclusive use of standard forms in the relational frame, which contradicts the expected pattern.

So: why are there any 'transactional' CBD-utterances by the mother? What are their characteristics?

1. Self-initiated self-repair

Within a turn:

MOT *ja das waar ma nu gade nu ga jij zitten () nu ga jij zitten*
‘yes that’s true but now you go now you go sit down () now you go sit down’

Across turns:

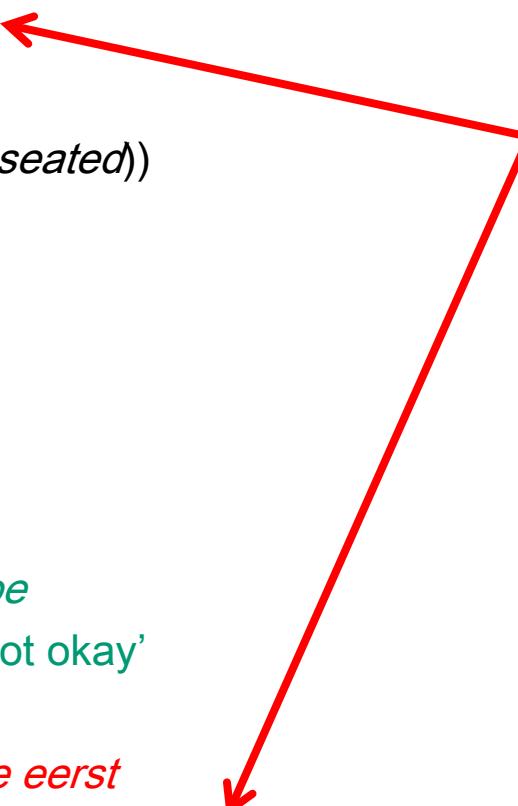

- 1 FAT *allé trek uw broek maar aan*
 'come on put on **your** pants'
- 2 MOT *allé trekt uw broek maar aan meneer de () trekt uw broek naar boven*
 'come on put on **your** pants mister ()' 'pull up **your** pants'
- 3 CH2 *auw*
- 4 MOT *nee broek naar boven voor je erop gaat zitten (.) nee.*
 'no pants up before you sit on them (.) no'
- 5 FAT *nee*
 'no'
- ((*child attempts to hitch up his pants while being seated*))
- 6 MOT *nee (.) da gaa nie*
 'no (.) that does not work'
- 7 FAT *onnozele onnozele*
 '(you) silly silly'
- 8 CH2 *da ga wel e*
 'it does work hey'
- 9 FAT *en dan zit uw onderbroek nie goe*
 'and then **your** underpants are not okay'
- ((*child falls from his chair*))
- 10 MOT *das waarom da we zeggen da je eerst*
 'that's why we say that you first'
- 11 *je broek moet aandoen en dan pas op je stoel gaan zitten*
 'have to put on **your** pants and then sit on **your** chair'

- 1 FAT *alleé trek uw broek maar aan*
 'come on put on your pants' ←
- 2 MOT *allé trekt uw broek maar aan meneer de () trekt uw broek naar boven*
 'come on put on **your** pants mister ()' 'pull up **your** pants'
- 3 CH2 *auw*
- 4 MOT *nee broek naar boven voor je erop gaat zitten(.) nee.*
 'no pants up before you sit on them (.) no'
- 5 FAT *nee*
 'no'
- ((*child attempts to hitch up his pants while being seated*))
- 6 MOT *nee(.) da gaa nie*
 'no (.) that does not work'
- 7 FAT *onnozele onnozele*
 '(you) silly silly'
- 8 CH2 *da ga wel e*
 'it does work hey' ↗
- 9 FAT *en dan zit uw onderbroek nie goe*
 'and then **your** underpants are not okay'
- ((*child falls from his chair*))
- 10 MOT *das waarom da we zeggen da je eerst*
 'that's why we say that you first'
- 11 *je broek moet aandoen en dan pas op je stoel gaan zitten*
 'have to put on **your** pants and then sit on **your** chair'

Father uses CBD
consistently

- 1 FAT *allé trek uw broek maar aan*
 'come on put on your pants'
- 2 MOT *allé trekt uw broek maar aan meneer de () trekt uw broek naar boven*
 'come on put on your pants mister ()' 'pull up your pants' Almost literal
 mirroring by
- 3 CH2 *auw*
- 4 MOT *nee broek naar boven voor je erop gaat zitten (.) nee.*
 'no pants up before you sit on them (.) no'
- 5 FAT *nee*
 'no'
- ((*child attempts to hitch up his pants while being seated*))
- 6 MOT *nee (.) da gaa nie*
 'no (.) that does not work'
- 7 FAT *onnozele onnozele*
 '(you) silly silly'
- 8 CH2 *da ga wel e*
 'it does work hey'
- 9 FAT *en dan zit uw onderbroek nie goe*
 'and then your underpants are not okay'
- ((*child falls from his chair*))
- 10 MOT *das waarom da we zeggen da je eerst*
 'that's why we say that you first'
- 11 *je broek moet aandoen en dan pas op je stoel gaan zitten*
 'have to put on your pants and then sit on your chair'
- Father uses CBD consistently
- Mother

1	FAT	<i>allé trek uw broek maar aan</i> 'come on put on your pants'	Father uses CBD consistently
2	MOT	<i>allé trekt uw broek maar aan meneer de () trekt uw broek naar boven</i> 'come on put on your pants mister ()' 'pull up your pants'	Almost literal mirroring by Mother
3	CH2	<i>auw</i>	
4	MOT	<i>nee broek naar boven voor je erop gaat zitten (.) nee.</i> 'no pants up before <u>you</u> sit on them (.) no'	
5	FAT	<i>nee</i>	
		<i>'no'</i>	
((child attempts to hitch up his pants while being seated))			
6	MOT	<i>nee (.) da gaa nie</i> 'no (.) that does not work'	
7	FAT	<i>onnozele onnozele</i> '(you) silly silly'	
8	CH2	<i>da ga wel e</i> 'it does work hey'	
9	FAT	<i>en dan zit uw onderbroek nie goe</i> 'and then <u>your</u> underpants are not okay'	
((child falls from his chair))			
10	MOT	<i>das waarom da we zeggen da je eerst</i> that's why we say that <u>you</u> first'	
11		<i>je broek moet aandoen en dan pas op je stoel gaan zitten</i> have to put on <u>your</u> pants and then sit on <u>your</u> chair'	

Shift to SL which remains consistent, even during 'dramatic' events

2. CBD in negotiation - as a form of mitigation?

MOT *eerst een hap en dan moogt ge uw mop vertelle*

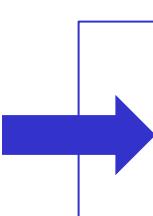

‘first a bite and then **you** can tell **your** joke’

MOT *kom (.) ewel ier steek deze in uw mond en dan kriebelt ge verder*

‘come (.) well here put this in **your** mouth and then **you** tickle on’

3. CBD in reactions to child-initiated non-routine requests

- | | | |
|---|-----|---|
| 1 | CH2 | <i>mag ik proeven van die saus</i>
‘can I taste that sauce’ |
| 2 | MOT | <i>gij moogt daar es van proeven (.) wacht ze man</i>
‘ you can taste that (.) wait my man’ |
| 3 | CH2 | <i>is da pikant</i>
‘is that spicy’ |
| 4 | MOT | <i>jah</i>
‘yes’ |
| 5 | CH2 | <i>nee (.) k wil da nie proeven</i>
‘no (.) I don’t want to taste that’ |
| 6 | MOT | <i>ma proeft es (.) dan weete wat dat da is pikant</i>
‘but taste it once (.) then you know what that is spicy’ |

 Non-serious request, cf. non-verbal activity of the mother putting some sauce on the child's finger

3. CBD in reactions to child-initiated non-routine requests

1 CH2 *mag ik proeven van die saus*

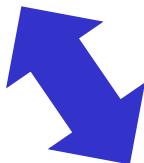

'can I taste that sauce'

2 MOT *gij moogt daar es van proeven (.) wacht ze man*

'*you* can taste that (.) wait my man'

3 CH2 *is da pikant*

'is that spicy'

4 MOT *jah*

'yes'

5 CH2 1 MOT *moet ik moet ik het moet ik er een beetje in je bord doen*

'shall I shall I shall I put a little bit on your plate'

6 MOT 2 CH3 *nee*

'no'

3 CH2 *bij mij wel (.) bij mij wel*

'for me yes (.) for me yes'

4 MOT *bij jou wel*

'for you yes'

When the activity is ratified
as a part of the 'real'
dining practice, there is a
shift to SL

Mother in transactional frame

The mother's CBD-use in the transactional frame

- is often self-repaired
- often occurs in 'special' positions

complexity of intersecting interactional features and contextual factors potentially influence the choice between CBD and standard language and may elicit style shifts

Overview

1. Child-directed speech and sociolinguistic awareness
2. Colloquial Belgian Dutch

Sociolinguistic interview

MOTHER: Standard Dutch as the (unattainable) norm

Ik vind da(t) zo moeilijk om te zeggen da(t) ik Algemeen Nederlands praat. Voor mij is Algemeen Nederlands het taalgebruik van de journalisten. Dan (h)eb ik nie(t) de pretentie, allez ja, om te zeggen da(t) ik Algemeen Nederlands praat.

'I find it so hard to say that I speak Standard Dutch. For me Standard Dutch is the language use of the journalists. Then I won't be as pretentious, well, as to say that I speak Standard Dutch.'

Sociolinguistic interview

FATHER: teach children what to use when

Ik denk da(t) we allebei toch wel het belangrijk vind(e)n da(t) ze effectief kunnen switchen, da(t) ze effectief Algemeen Nederlands kunnen kennen en dat ze ook weten dat er een aantal contexten zijn waar da ge da beter nie(t) gebruikt, maar dat het goed is da(t) je da(t) kan. Da(t) ge da(t) nie(t) moet doen als ge bij uw vrienden zit, da(t) da(t) iets anders is, maar da(t) ge weet hoe het int [: in het] echt moet.

'I think we both find it important that they really are able to switch, that they are truly able to know Standard Dutch and that they also know that there are a number of contexts where you better don't use that, but that it's good that you can. That you don't have to do that when you are with your friends, that that is something different, but that you know how to do it in real life.'

Summarizing

Father: teaching children sociolinguistic awareness

Mother: mainly aiming for the standard, less variation

Generally

- Effect of age in CDS needs to be understood against the background of frames
- Different language regards can be present in the same family: conflicting evidence for status of CBD, even in one family
- Importance of mixed methods

Future

→ More families, more variables, more data...
