

# Linking grammaticalization to historical demography

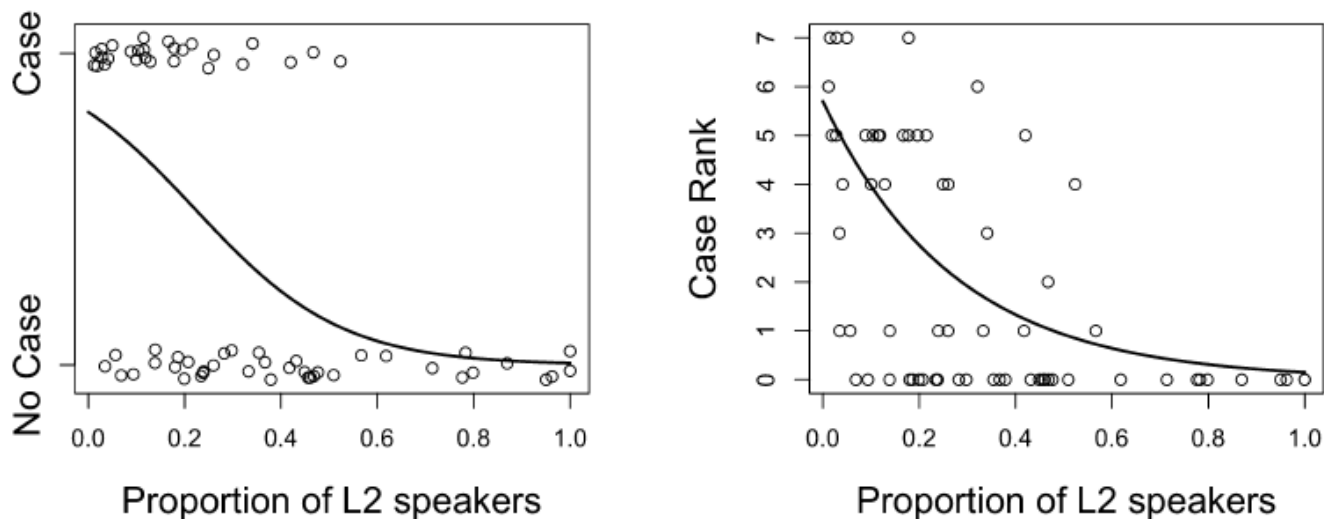

Freek Van de Velde<sup>1</sup> & Peter Petré<sup>2</sup>

<sup>1</sup>University of Leuven

<sup>2</sup>University of Antwerp / ERC

# Demography and language change

- Demography has an impact on language change (Milroy & Milroy 1985; Trudgill 2011 ...)
  - Correlation between population size and analyticity (Lupyan & Dale 2010)
  - Correlation between proportion of L2 speakers and analyticity (Bentz & Winter 2013)
  - Diachronic dimension (Kusters 2003; Szmrecsanyi 2012)

(Bentz & Winter 2013)

# Demography and language change

- Previous studies:
  - If ‘nomothetic’, they are mainly broad-scope cross-linguistic studies
  - Have fairly low-level resolution of the demographics
  - Are often synchronic

# Case study: *be going to*

- Prime example of grammaticalisation studies
- Analytic future, arose in Early Modern English  
[I am going] [to buy some chocolate] > [I am going to buy some chocolate]
- Source  
[[*go*][motion]] + [[*be Ving*][on-goingness]] + [[*to* INF][purpose]]  
*I am goyng to the Pope, to praie him to place me in mariage.* (1566)
- By 1700 reanalysis is apparent  
*There is going to be such a calm among us.* (1725)

[Hilpert (2008), Traugott & Trousdale (2013), Traugott (2015),  
Disney (2009), Budts & Petré (2016), Petré (2016), etc.]

# Corpus & data selection

- Corpora/Resources
  - [eebo.chadwyck.com](http://eebo.chadwyck.com): English books printed 1473-1700
  - EEBOCorp 1.0 (Petré 2013)
  - EMMA (*Early Modern Multiloquent Authors*) (Petré et al. 2017)
- Selection of **twenty-two** writers
  1. Prolific
  2. Constant register over time
  3. Roughly same social status.
- 50 million+ tokens
  - 3k – 11m words/author
  - 10,000+ *going* (including variants)
  - **1132** *be going to* INF
  - linked to rich metadata including author mobility history

# Analysis

- Coding of
  - formal features
  - semantic features
- Commonly associated with grammaticalisation of *be going to*.
- Each data point is given a score per feature
- Add up to an overall score (max. 10) for the level of grammaticalisation reached in a particular observation

Type	Feature	Example	Value [score]
FORMAL	ADJACENCY	He's going ( <b>now</b> ) to see some fresher beauties.	Non-adjacent [0]; Adjacent [1]
	FRONTING	<b>that barbarous action</b> he was going to commit.	No [0]; Yes [1]
	VOICE	Are not you going <b>to be married?</b>	Active [0]; Passive [1]
	OTHER	If a Contention should be going <b>to go</b> to Begin	Parenthetical [1]; Coordination with AUX [1]; Raising [2]; go-INF [2]
SEMANTIC	GOAL	I am just now going <b>to a Lawyer</b> to aske	Early [0]; Late [0.5]; No [1]
	MOTION	I was going <b>to be damnably in Love.</b>	Motion [0]; Soul's journey to heaven [0.5]; Indeterminate [1]; No motion [2]
	ANIMACY	<b>Examples which</b> are now going to be Familiar.	Animate [0]; Inanimate [1]
	PREDICTIVENESS	the Devil <b>is going</b> to be Dislodged... God <b>will</b> ... cause him to fall.	Egophoric [0]; Indeterminate [1]; Reporting [1]; Epistemic [2]

# Lowess regression

Natural Increase ('00,000)

# London: unusually high population turnover

Wrigley & Schofield  
1994: 166-169

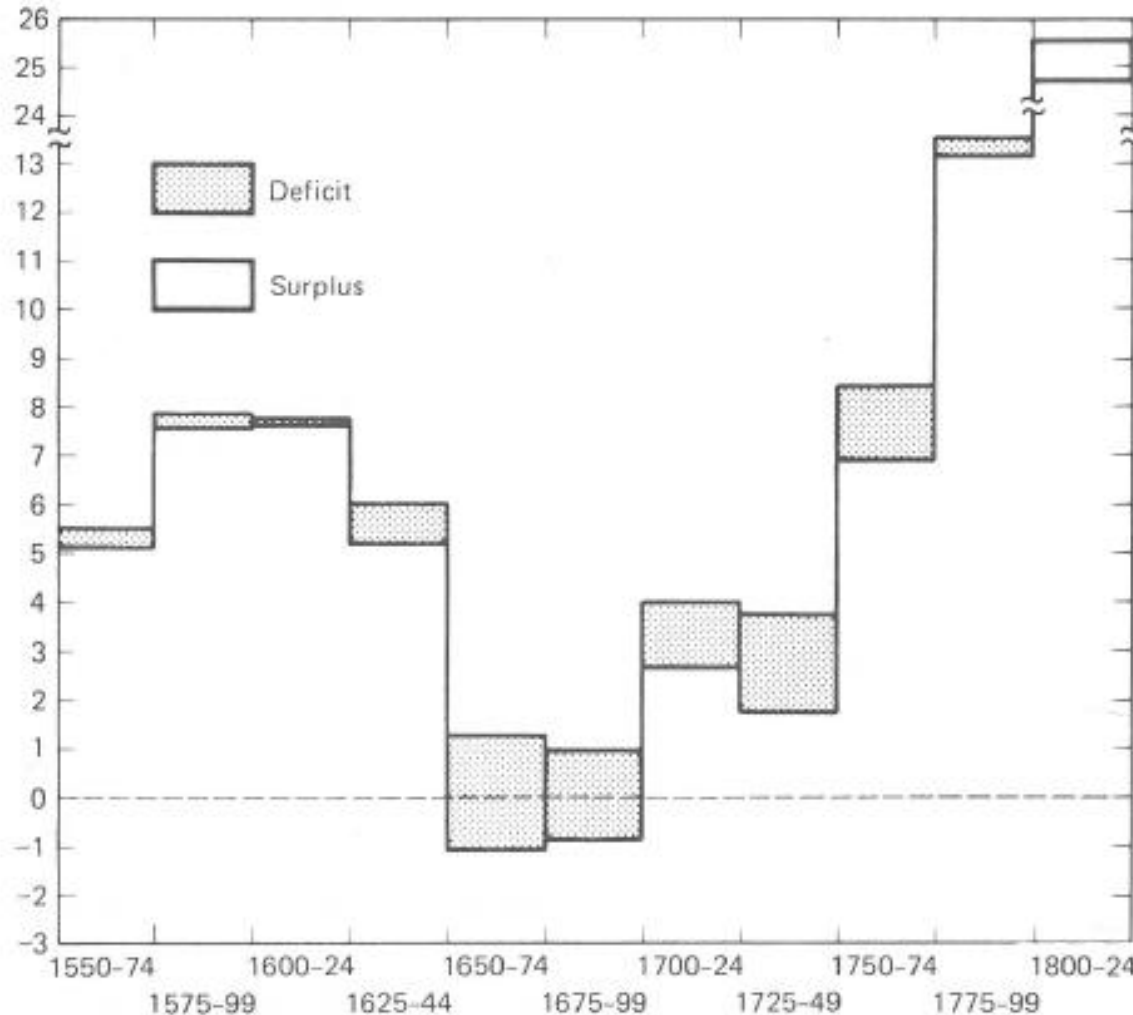

Figure 6.2: Natural increase in London and England by quarter century, 1550–1824

"(...) London's particular demographic characteristics of massive immigration and high mortality."

"In the second half of the seventeenth century the extra-metropolitan surpluses fell precipitously while the London deficits rose so that the latter were almost exactly double the former, thereby converting the non-London surplus into a national deficit of almost the same magnitude. In the early eighteenth century the rest of the country bounced back to record more substantial surpluses, but the London deficits continued at a high level and reduced the surpluses in the first two quarters of the century by 33 and 55 per cent respectively."

# Living in London

# Summary and conclusion

- *Be going to* is grammaticalising between 1650-1725
- London is centre of change
  - Melting pot of cultures
  - More deaths than births in London
  - Sustained growth solely through incoming migration
- Grammaticalisation rate peaks
  - Between 1680-1690
  - Whole of England suffers from increased death rate
  - Migration to London peaks
  - Incoming migrants are *young*
