**Chloé Dierckx** is a PhD researcher at the university of Leuven, faculty of social sciences and member of the Research group Social, Methodological and Theoretical Innovation/ Kreative (SoMeTHin’K) and the Meaningful Interactions Laboratory (MintLab). She has a background in Visual arts, Anthropology and Cultural Politics. Her research is concerned with how techniques from art and design can be used to disseminate scientific research. Her main focus is on implementing these techniques within an academic context, both in education and research, by overcoming the art-science divide.

**Nico Canoy** has a background in social and organizational psychology and is affiliated with Ateneo de Manila University in the Philippines and is a member of the Research group Social, Methodological and Theoretical Innovation/Kreative (SoMeTHin’K) in KU Leuven, Belgium. He specializes in the discursive-material dynamics of classed, gendered, and

sexualized realities of health care (e.g. HIV, drug use, mental health) in stigmatized settings, with a particular focus on theoretical and methodological development through posthuman experimentations in qualitative inquiry.

**Jessica Schoffelen** (PhD) works within the context of the research groups Inclusive Society (UC Leuven Limburg) and the Centre for Sociological Research (University of Leuven, SoMeTHin'K). She lectures on research methods (qualitative, art and design research methods) and investigates how to enable long-term participatory design and citizen engagement.

**Ellen Anthoni** is a PhD researcher working on co-creating future stories for change with citizens (University of Leuven, SoMeTHin'K). She is a trend researcher, youth expert, future fantasizer and art director. She's on a mission to build better futures, based on insights in and together with the next generation. She gives lectures and workshops on youth trends and helps organizations to understand and engage young people. As a co-founder of BrusselAVenir she builds future narratives that triggers "Brusseleirs"; to take their city and their future in their hands, and work together towards a resilient city for all.

**Sara Coemans** is a PhD researcher at the Laboratory for Education and Society (Faculty of Psychology and Educational Sciences) and SoMeThin'K (Faculty of Social Sciences) of the University of Leuven. In her research, she explores the potential of arts-based and multi-sensory approaches to study the relationship between people and their surroundings.

**Lynn Hendricks** is a Research Psychologist and Epidemiologist. She currently holds a joint PhD candidate position at the Faculty of Social Sciences (SoMeTHin'K), KU Leuven and Faculty of Medicine and Health Sciences, Stellenbosch University, where she also lectures and designs new modules. Her research interests include innovative decolonial research praxis, adolescence, health, and qualitative synthesis methods. She approaches her work from a decolonial academic activism perspective.

**Karmijn van de Oudeweetering** is a PhD student at KU Leuven, Belgium, at the Methodology of Educational Sciences Research Group. Her research is focused on developing innovative qualitative methods to study (online/open) educational initiatives. These methods address, among other things, spaces and times generated through interactions between online and offline educational practices.

**Ruth Segers** is a researcher at the University of Leuven, Department of Architecture and SoMeTHin'K. She obtained a PhD in Engineering Sciences: Architecture and a MA in Political Sciences. She now holds an Innovation Mandate (VLAIO) where she focusses on operationalizing arts-based methods for embodied cooperation in and for public and common place. Her ongoing research project is called "Mount Murals."

**Pinelopi Tzouva** is PhD researcher in Literature and Cultural Research. She holds a BA in Psychology, MA in Social and Cultural Anthropology and MA in Cultural Studies. Her Interests are chronic illness, breast cancer, queer theory, social justice, Deleuze and Guattari, auto-theory, arts-based research and activism.

**Hanne Vrebos** is a research associate for Urban Ecological Planning at the Norwegian University of Science and Technology (NTNU) and a PhD researcher at the faculty of Social Sciences of KU Leuven (SoMeTHin'K). Holding a background in Architectural engineering, inclusive urban planning and the humanitarian sector, her research focuses on participatory methods and citizen engagement in urban development.

**Karin Hannes** is associate professor at the Faculty of Social Sciences (Research Group SoMeTHin'K) of the University of Leuven. Her main research interest is in developing, applying, refining and re-appropriating approaches to qualitative research. She is most known for her academic contributions in the area of qualitative and mixed evidence synthesis. On a primary research level, she has been focusing on the use and further development of arts-based, multi-sensory, and place-based research methods in the context of public health, social-cultural and social welfare practice.

**Abstract:** This review is a bricolage of nomadic encounters with Jorge Lucero and colleagues' (2016) article on ways to engage with collaborative publishing. Lucero presents a Facebook discussion amongst practitioners denouncing the limited power of practitioners in shaping academic discourse. It shows how social media can serve as a platform for inviting the practitioner's voice into research. The authors illustrate that by using Facebook, practitioners' unfamiliarity and discomfort with academic standards can be bypassed. It demonstrates metalogue as a conceptual form of writing that disrupts the structure of conversations and challenges the authorial researchers' voices. A critical note, however, is whether it is beneficial in the long term to consider the academic and social media parts as separate accounts. We argue that collaborative publishing requires collaborative research and writing in the first place. In response to the article, we started a WhatsApp conversation. This enabled us to reflect on the content of the article and experience the use of social media as a collaborative writing method ourselves.

**Keywords:** WhatsApp; social media; collaborative research; creative dissemination; transdisciplinary

The article by Lucero and colleagues (2016) is a plea for inclusivity in academic writing. It exposes the boundaries practitioners might experience when trying to publish and how this leads to an alienation between practice and research. While Lucero's voice still dominates to a great extent, we believe the "raw" Facebook posts to be a powerful means to include a plurality of voices and overcome practical issues such as time constraints and discomfort with academic standards. We therefore decided to follow a similar method and start a WhatsApp conversation to reflect upon the article. This experimental approach is nomadic (Braidotti, 2019) in nature. It is post-disciplinary and has grown rhizomatically, through "relational assemblages and generative cross-pollination" (p. 14). The platform of WhatsApp allowed for our multi-disciplinary group to engage in a conversation free from time and place constraints. The informal character of the platform created a space to test ideas and share immediate thoughts disconnected from our academic identities. The form of this review was determined by the content and dynamics of our conversation: a messy, dynamic, cohesive and non-hierarchical structure. Similar to foam, each thought bubble was precarious and at risk of bursting. Each of the bubbles (as shown in the images below) had equal chance to increase its intellectual power and different components merged and morphed into something else. The foam metaphor symbolizes a new model for the collaborative publishing of Lucero et al., showing how social media creates a platform for agonism (Mouffe, 2013) where different opinions are challenged in an inclusive and non-hierarchical manner.

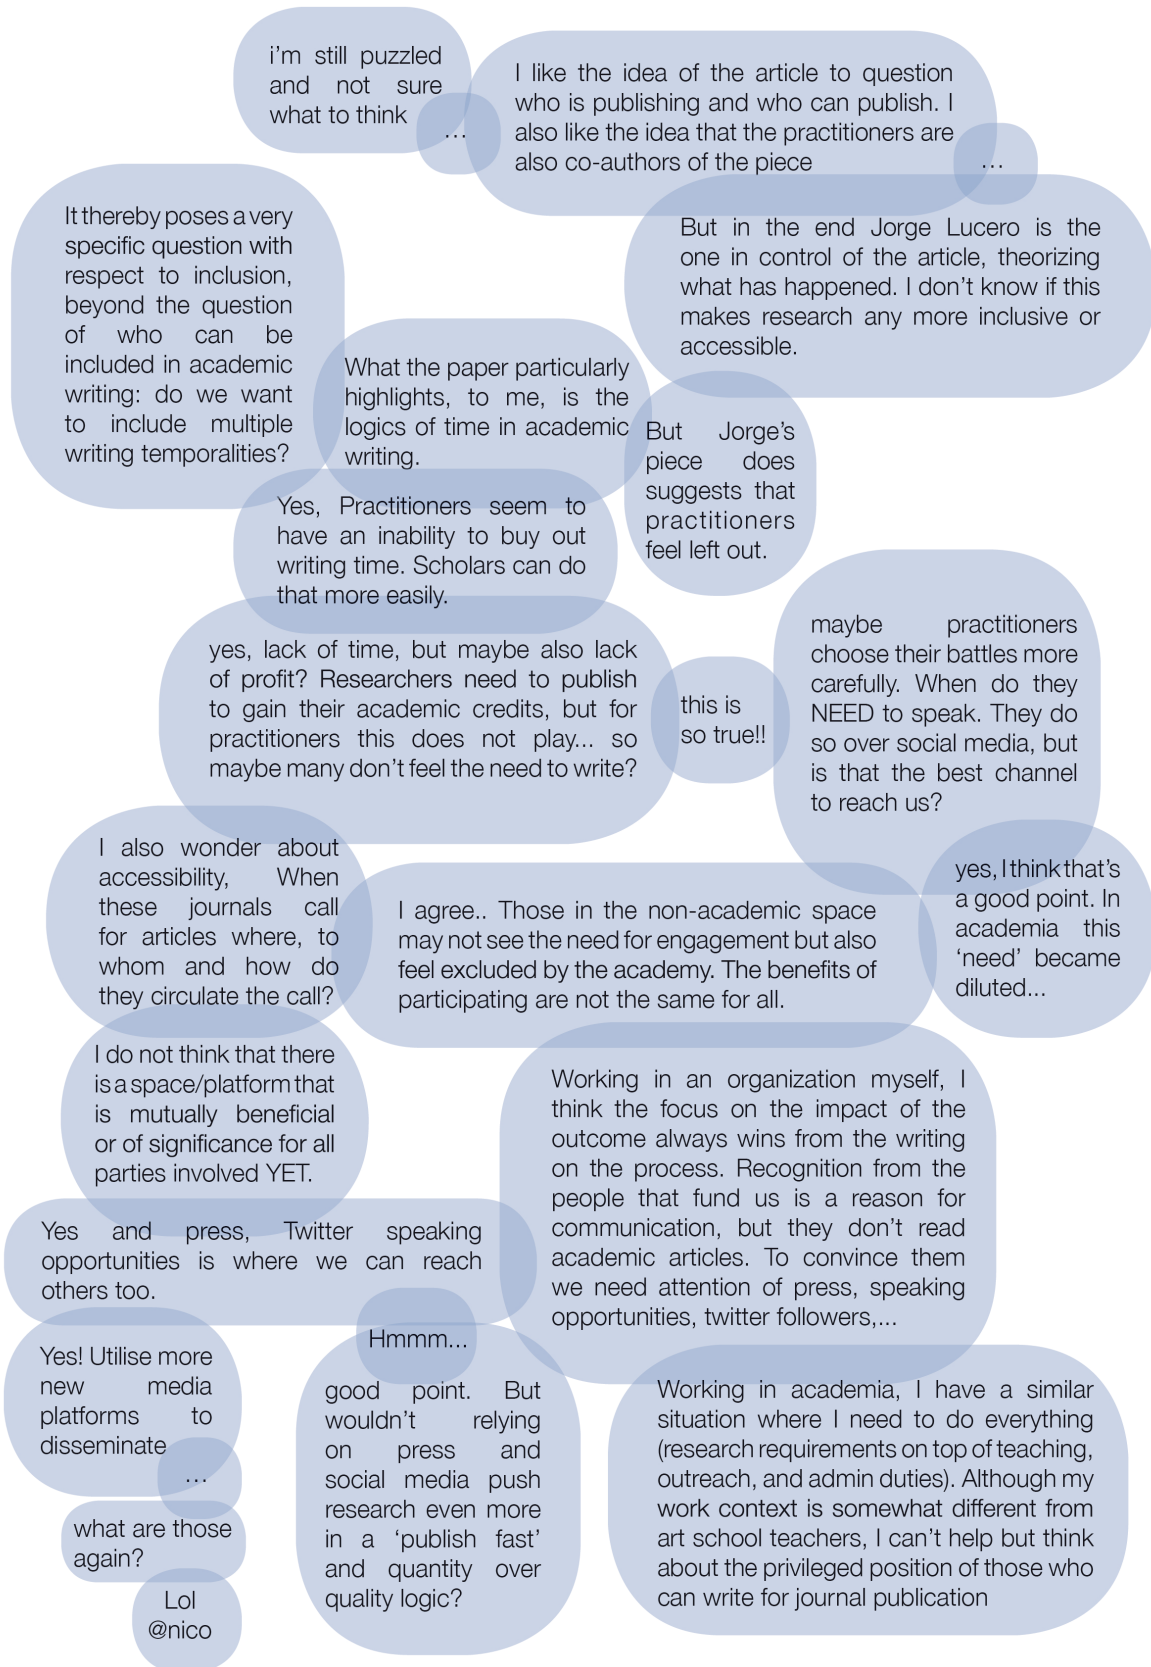

Goodmorning all!

As most of you will know by now, we will write a review article for Art/Research International on the article of Jorge Lucero, which you can find in addition. The current idea is to start a WhatsApp conversation on the article. I will then gather all the messages and compile them into the final review. I hope you all find some time to read it and share some reflections. Even very small idea's or comments could be inspiring for others to comment on!

Have a nice day!

Chloé

Personally, it helps a lot when you write something connected to your (work/personal) life. But is this realistic? Also how can we maintain critical distance in our research practice ?

I think this is a very interesting dilemma... how do we create a balance between personal connection and commitment and the distance sometimes needed to critically reflect?

I guess I'm referring to how (experientially) close people from their objects of inquiry. If you're too close or too far, it's harder to see and weave things together

I wonder why this act of balancing interpersonal connection and personal connection (i am giving the latter concept another connotation as done in the previous input) should be considered a dilemma? Also why would 'critical reflection' demand 'distance'? From what?

...

iterative process of moving from different speaking positions I think is valuable

this is again an important argument, and makes a distinction between social media and journals. A 'bricolage mode' however could create this distance because other people can intervene in the narration of the writing, as well as there is some time in between to reflect on each others contributions.

nice idea Karmijn. Do you think such a bricolage model could work for all kinds of research questions? Like some sort of online laboratory where everyone can contribute?

But, just like in this case there will have to be someone to take the final lead (Lucero is quite present in the article still).

or am I wrong to assume there would still need to be some kind of synthesis?

A little bit like we can do now in this conversation.

I do wonder how the sharing of Facebook comments in the article is so radically different from sharing interview transcripts or transcripts of focus groups as we do so often.

or could a synthesis also just follow naturally, like at the end of a discussion

This reminds me of one of Eisner's criteria for Arts Based Research: 'structural corroboration', how the researcher pulls together all the information to form a coherent and persuasive whole.

?

A criterium criticised by many scholars because what about the arts playing the role of permanent resistance? As scholars like Springgay & Truman would critique such places of synthesis are simply new arenas of neo liberal control.

So do we still need some kind of synthesis? And what's the alternative? I don't know

I think it does express resistance and the voice of these people.

some artworks also function as syntheses I think. And can't a synthesis include resistance?

could you expand a bit on the friction between synthesis and arts as resistance? I don't understand that yet

...

...
