

Socio-stylistic aspects of syntactic variation: the case of Spanish asyndetic complementation (15th-18th c.)

Giulia Mazzola (KU Leuven)

Bert Cornillie (KU Leuven)

Malte Rosemeyer (Universität Freiburg / KU Leuven)

Stefano De Pascale (KU Leuven)

Codea-0377, 1522. (<http://www.corpuscodea.es/>)

**53rd Annual Meeting of the
Societas Linguistica Europaea
26 August – 1 September 2020**

(A)syndetic alternation in Spanish

(Pre-)classical Spanish (15th-18th century)

(1) [...]	<i>le</i>	<i>dijo</i> _{V1}	<i>que</i>	<i>ella</i>	<i>sabía</i> _{V2}	<i>un</i>	<i>medio</i>	<i>para</i>	<i>sacar</i>
	DAT.3SG	say.IND.PFV.3SG	COMP	she	know.IND.IPFV.3SG	INDF.M	way	to	take.out.INF
	<i>a</i>	<i>su</i>	<i>hermano</i>	<i>de</i>	<i>la</i>		<i>prisión</i>		
	ACC	POSS.M.SG	brother	of	DET.F.SG		prison		

‘[...] she said to him that she knew a way to take his brother out of prison’ (Valencia, 1731, CODEA-2119)

(2) [...]	<i>don Francisco Gris</i>	<i>dijo</i> _{V1}	<i>al</i>	<i>testigo</i>	Ø	<i>tenía</i> _{V2}	<i>que</i>	<i>delatar</i>
	Mr. Francisco Gris	say.IND.PFV.3SG	to.DET.M.SG	witness		have.IND.IPFV.3SG	that	denounce.INF
	<i>al</i>	<i>reo</i>	<i>por</i>	<i>cosas</i>	<i>de</i>	<i>molinista</i>		
	ACC.DET.M.SG	defendant	for	thing.PL	of	molinist		

‘[...] don Francisco Gris said to the witness he had to denounce the defendant for molinist issues’ (Cuenca, 1729, CODEA-2140)

(A)syndetic alternation in Spanish

(Pre-)classical Spanish (15th-18th century)

SYNDETTIC

(1) [...]	<i>le</i> DAT.3SG	<i>dijo</i> _{v1} say.IND.PFV.3SG	<i>que</i> COMP	<i>ella</i> she	<i>sabía</i> _{v2} know.IND.IPFV.3SG	<i>un</i> INDF.M	<i>medio</i> way	<i>para</i> to	<i>sacar</i> take.out.INF
	<i>a</i> ACC	<i>su</i> POSS.M.SG	<i>hermano</i> brother	<i>de</i> of	<i>la</i> DET.F.SG		<i>prisión</i> prison		

‘[...] she said to him that she knew a way to take his brother out of prison’ (Valencia, 1731, CODEA-2119)

ASYNDETTIC

(2) [...]	<i>don Francisco Gris</i> Mr. Francisco Gris	<i>dijo</i> _{v1} say.IND.PFV.3SG	<i>al</i> to.DET.M.SG	<i>testigo</i> witness	∅	<i>tenía</i> _{v2} have.IND.IPFV.3SG	<i>que</i> that	<i>delatar</i> denounce.INF
	<i>al</i> ACC.DET.M.SG	<i>reo</i> defendant	<i>por</i> for	<i>cosas</i> thing.PL	<i>de</i> of	<i>molinista</i> molinist		

‘[...] don Francisco Gris said to the witness he had to denounce the defendant for molinist issues’ (Cuenca, 1729, CODEA-2140)

Asyndetic construction in Spanish

- It started spreading in the 15th century (Pountain 2015)
 - Heydays: 16th and 17th century
 - It is still popular at the end of the 18th century
- closely competing with the syndetic variant

(Mazzola, Cornillie & Rosemeyer *submitted*)

Asyndetic complements in Spanish

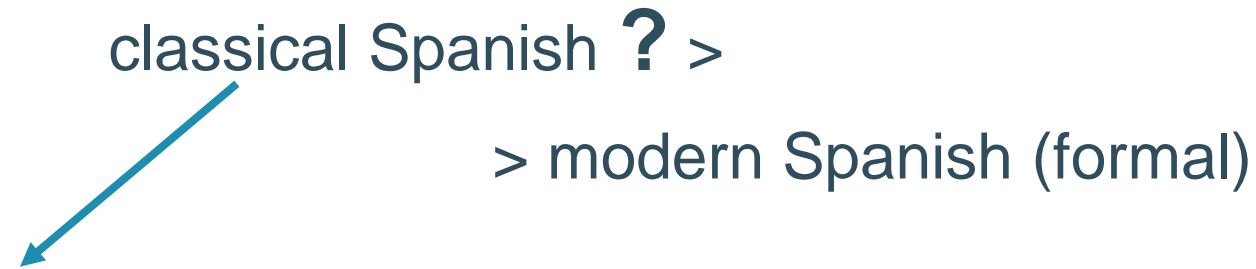

(Pre-)classical Spanish (15th-18th century)

- Distinctive syntactic feature of the period
 - Frequent with indicative and subjunctive complement clauses
 - With a wide range of predicates

Present-day Spanish

- Restricted to subjunctive-selecting verbs
- Stylistically marked → Formal genres

Stylistic path of the construction

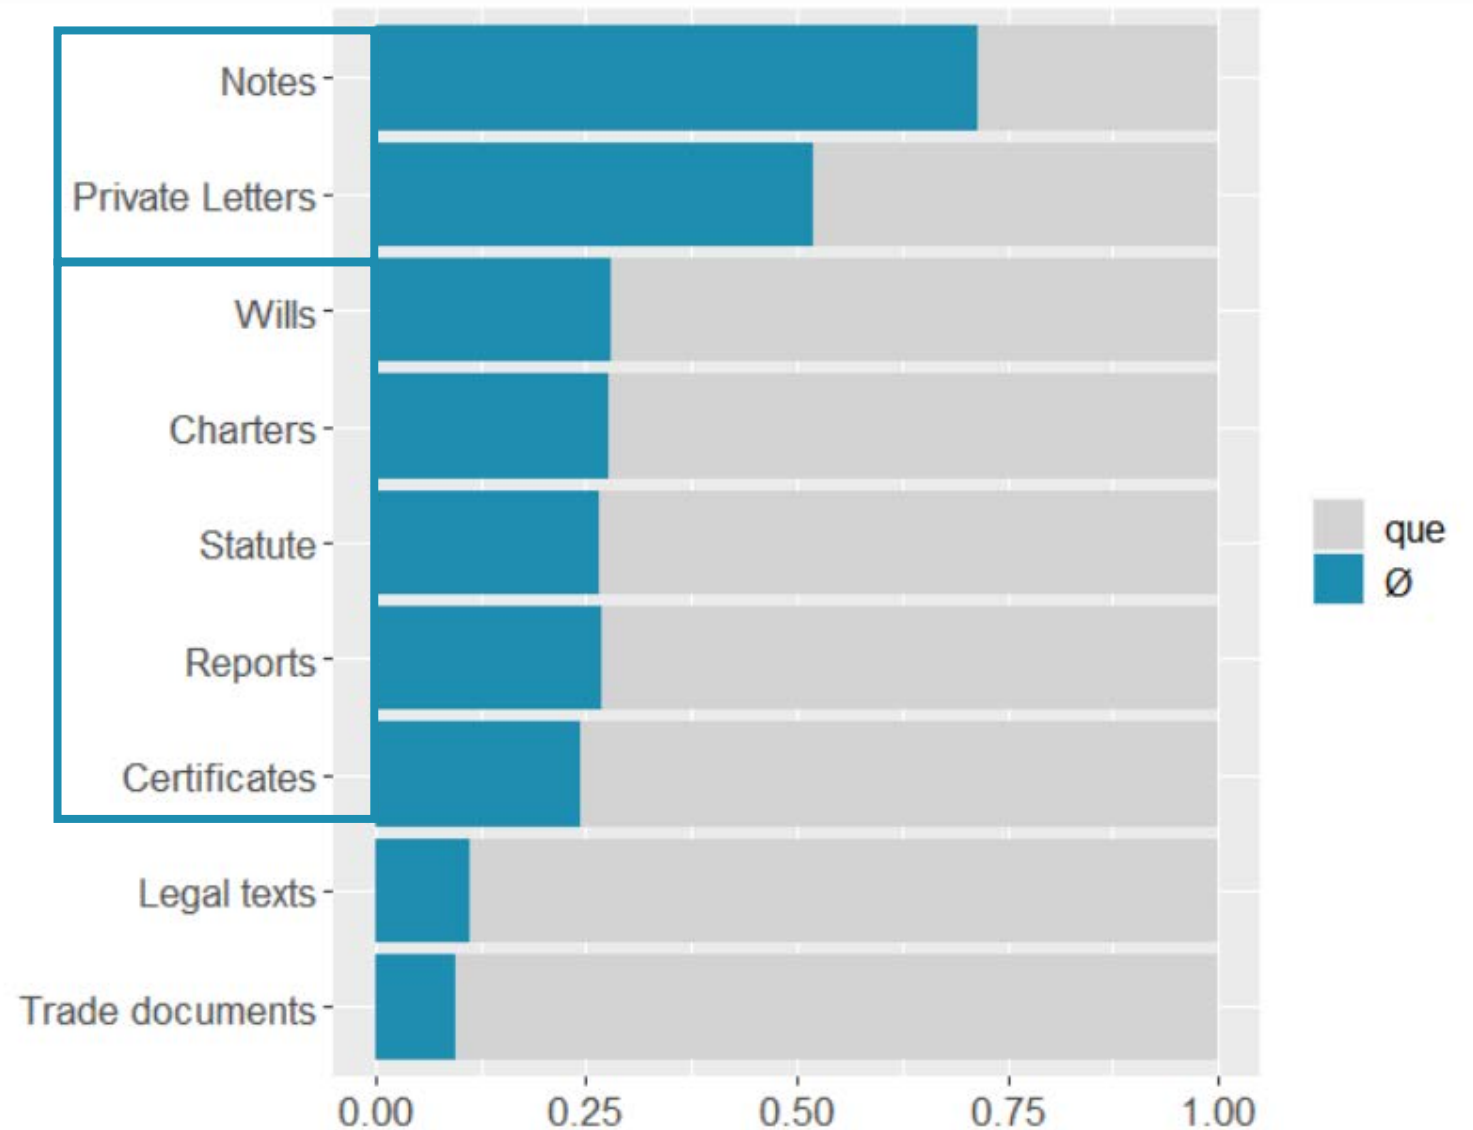

- Language of **distance** (literary, administrative language)
(i.a. Serradilla 1997; Girón Alconchel 2005; Espinosa Elorza 2014; Barraza Carbajal 2014)
- Language of **immediacy** (epistolary and informal language)
(Fernández Alcaide 2009; Blas Arroyo & Porcar Miralles 2016)
- **Idiolect** of some authors
(Keniston 1937; Octavio de Toledo y Huerta 2011)

Document Type

From the corpus

CODEA+2015

- Ø is more frequent than *que* in Private Letters and Notes
- Ø is ~25% in administrative/bureaucratic documents
- Insufficient variable to explain the variation

Mazzola Cornillie & Rosemeyer (2019)

Research Questions

- Was the asyndetic construction a stylistically marked variant?
 - Is it bound to some specific textual genres or Discourse Traditions (distance vs. immediacy)? → the role of *Junktion* (Kabatek et al. 2010)
 - Is the alternation between *que* and \emptyset influenced by the intended audience of a text? (Audience Design, cf. Bell 2001)
- Which VARIABLES explain better the observed variation?
 - Main verb (language-internal predictor)
 - Relationship of social power/solidarity between writer and addressee (manual annotation)
 - New documents classification:** clusters of documents based on word frequency (automatic annotation)

Data & Methods

Corpus CODEA+2015

- Spanish documents written until 1799
- High level of philological accuracy
- Cornillie & Rosemeyer (2018): extraction and manual selection of the variable context:
main verb/construction + que/∅ + finite complement clause

Today's study includes

Tot. 3943 tokens

- **Mixed effects logistic regression**

Variables

VERB CLASS (verbs with more than 30 occurrences in the dataset)

Verb class	Verbs	Meanings	Syndetic tokens	Asyndetic tokens
Communication	<i>Decir</i>	'to say'	832	138
Volition	<i>Querer</i>	'to want'	245	39
Order	<i>Mandar, Ordenar</i>	'to order'	996	212
Request	<i>Pedir, Rogar, Suplicar</i>	'to ask, to beg, to plead'	375	576
Others	<i>Entender</i>	'to understand'	447	83
	<i>Parecer</i>	'to seem'		
	<i>Saber</i>	'to know'		
	<i>Creer</i>	'to believe'		
	<i>Ver</i>	'to see'		

Variables

ADDRESSEE + STATUS: - is the text addressed to someone? - relationship between issuer and addressee

Superior: the addressee has a higher social status than the issuer
(a citizen to an institution, a nun to an aristocrat...)

Equal: addressee and issuer have the same status
(family members...)

Inferior: the addressee has a lower social status than the issuer
(the king to the citizens, the bishop to some monks...)

No addressee: document not addressed to someone in particular

Variables

DOCUMENT CLUSTERS – Bottom-up classification of the documents by words and word frequencies

Vector Space Model (see De Pascale 2019)

- main idea =
 - Characterize every text ('document') by means of the frequency of the words ('terms') used in that text
 - **Discourse Traditions** are defined by the relative frequency and distribution of lexical, grammatical and formulaic elements (cf. Kabatek et al. 2010: 7)
 - Texts that share similar words with similar frequency profiles belong to the same Discourse Traditions

Variables

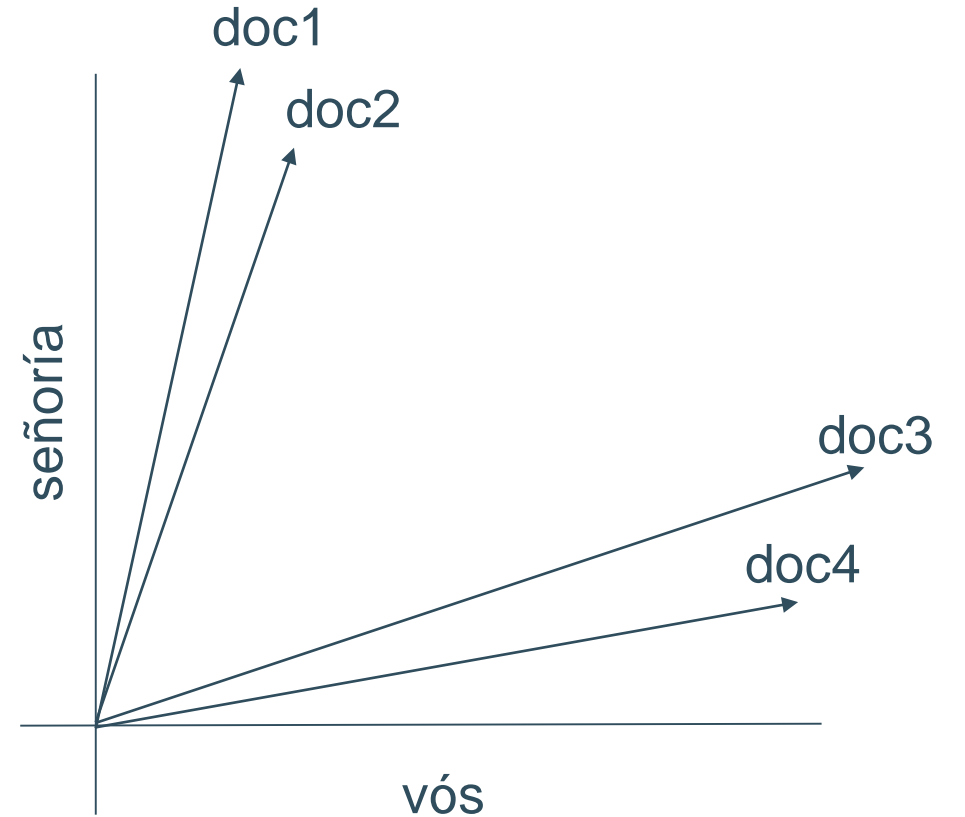

Vector space model

Document-by-term matrix

each document is represented as a vector of (weighted) counts of the (most significant) terms in that document

	señoría	merced	señor	convento	vós	ciudad
doc1	284	79	125	134	0	3
doc2	163	178	114	52	0	0
doc3	8	4	5	7	123	184
doc4	0	2	0	1	360	354

Document vector

Numeric vectors (the arrows, i.e. the documents) are compared for similarity

Variables

DOCUMENT CLUSTERS

two-dimensional visualization of document-based vector space model (technique: t-sne)

- 1 point in scatterplot = 1 text from corpus
- points close to each other = text with similar words and words' frequencies
- Each document clustered in 5 groups based on their vector similarity (technique: hierarchical cluster analysis)

Variables

- **DOCUMENT CLUSTERS**

Cluster 1

Cluster	Label	N. Tokens	N. Documents
1	Latin and Oriental	175	48

Typical words: *et, testist, confirmat, cum, ciudat, testament, dito*

Variables

- **DOCUMENT CLUSTERS**

Cluster 2

Cluster	Label	N. Tokens	N. Documents
1	Latin and Oriental	175	48
2	Bureaucratic	2048	508

Typical words: *reales, villa, ciudad, señorías*

Variables

- **DOCUMENT CLUSTERS**

Cluster 3

Cluster	Label	N. Tokens	N. Documents
1	Latin and Oriental	175	48
2	Bureaucratic	2048	508
3	Letters / Polite Requests	480	187

Typical words: *vuestra, señoría, merced, excelencia, magestad, ilustrísima*

Variables

- **DOCUMENT CLUSTERS**

Cluster 4

Cluster	Label	N. Tokens	N. Documents
1	Latin and Oriental	175	48
2	Bureaucratic	2048	508
3	Letters / Polite Requests	480	187
4	Laws	1197	214

Typical words: *vós, nós, monasterio, ciudad, iglesia, cabildo*

Variables

- **DOCUMENT CLUSTERS**

Cluster 5

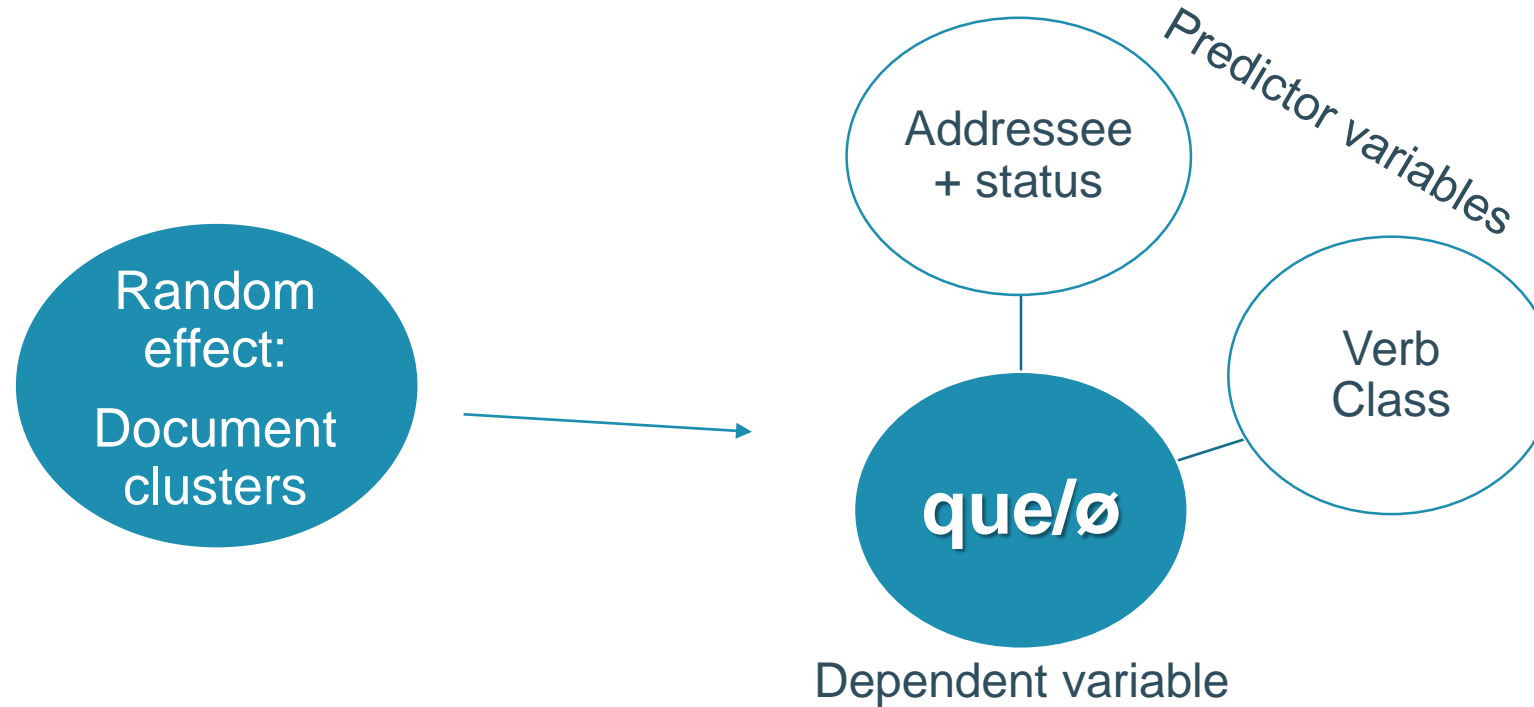

Cluster	Label	N. Tokens	N. Documents
1	Latin and Oriental	175	48
2	Bureaucratic	2048	508
3	Letters / Polite Requests	480	187
4	Laws	1197	214
5	Notes	43	35

Typical words: *niño/a, cristiano/a, llamase, agua, criatura*

Mixed effects logistic regression

R package: lme4
(Bates et al. 2015)

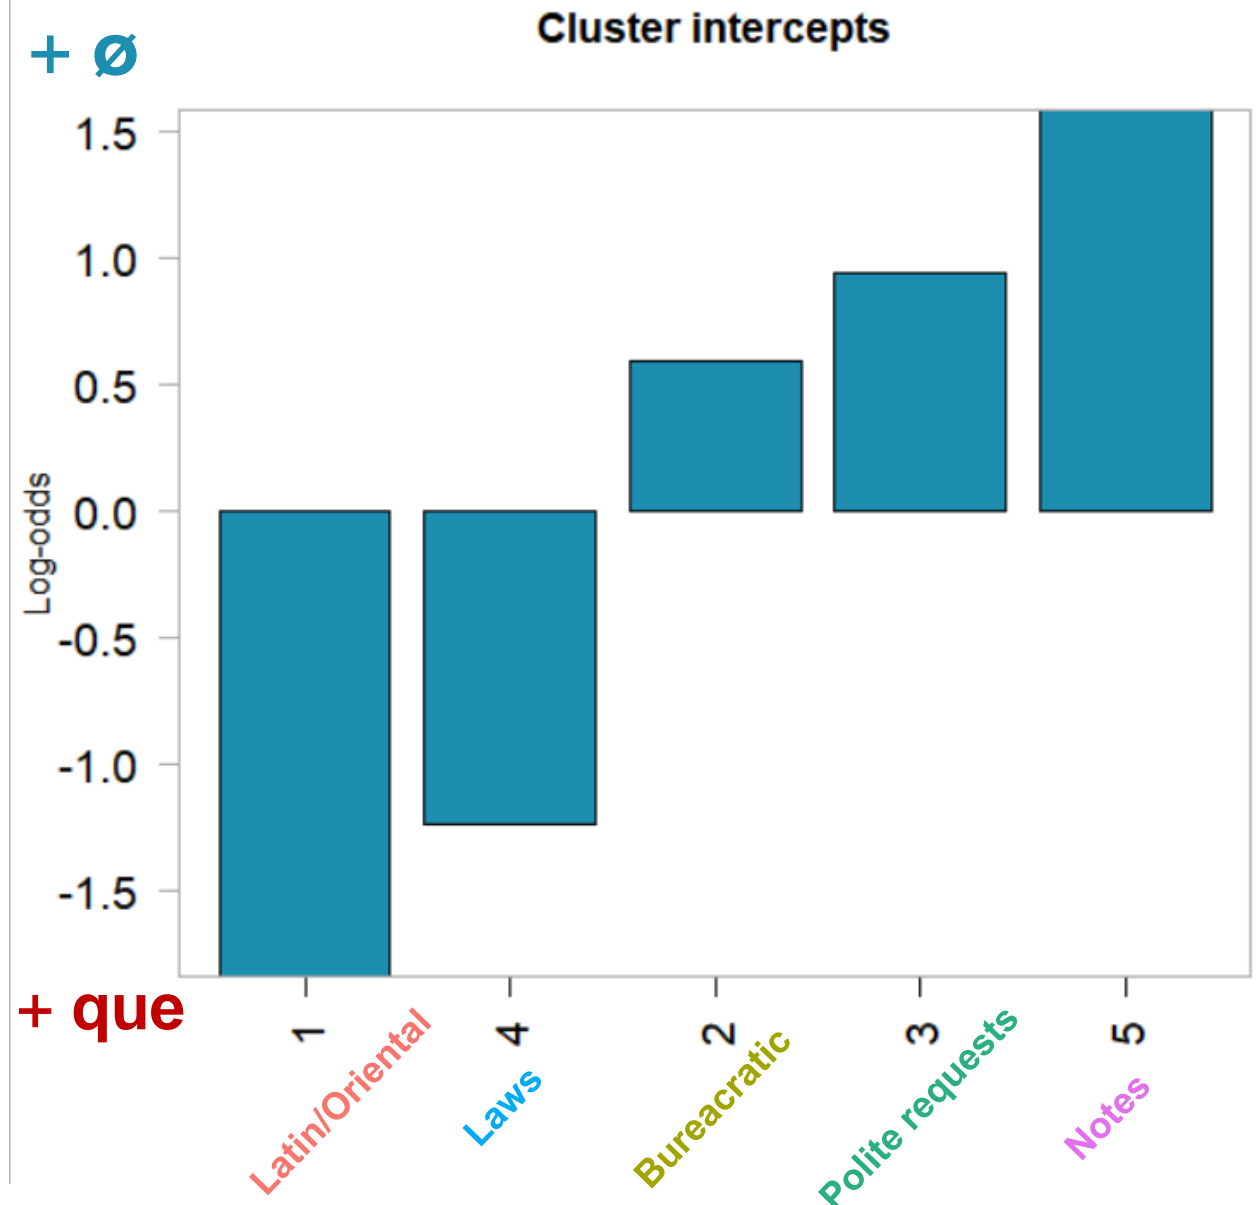

- A sample of 5 document clusters out of an indefinite number of topics and possible clusters

AIC= 3420.8
C index= 0.81

Document Clusters

- Asyndetic complements are mostly predicted by cluster **3-Polite requests** and **5-Notes**
- To a minor extent, asyndetic complementation is favored by group **2-Bureaucratic**
- Group **1-Latin/Oriental** and **4-Laws** favor the presence of *que* in the complement clause

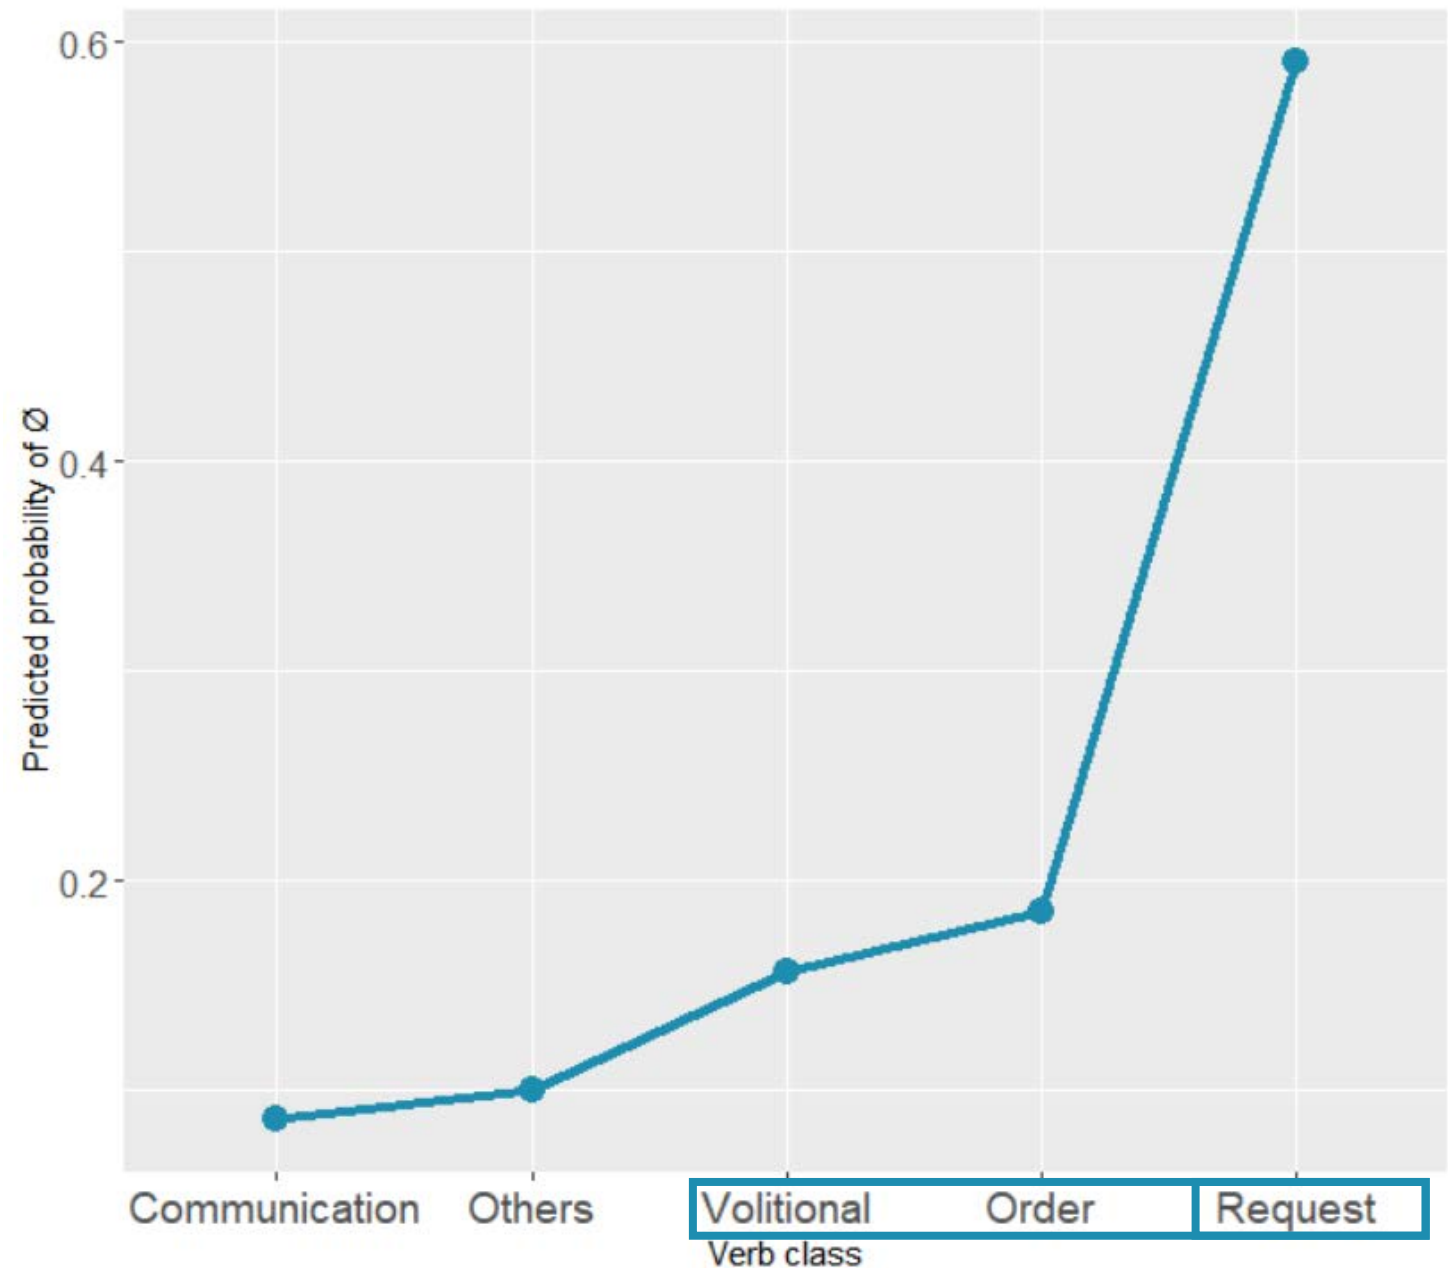

Addressee + Status

- Asyndetic complementation is
 - mostly favored when addressing someone with a higher social status
 - Avoided when addressing subordinated people
- Difference between *addressee* vs. *no addressee* = statistically significant
 $\chi^2=81.572$, $df = 1$, $p\text{-value} < 2.2e-16$

Verb Class

- Best predictor: verbs of request (neutral verb *pedir* ‘to ask’, deferential verbs *rogar* and *suplicar* ‘to beg’)
- Surprising difference between **request** and **order/volitional verbs**
→ very often they share semantic and syntactic features

Summary of the results

Predicted probabilities of asyndetic complementation by context:

CODEA-1757

→ The King to the deputy mayor of Alcalá de Henares: order to inferior addressee, cluster **4-Laws**

5) *E mandamos_{v1} a vós las nuestras justicias **que tengáis**_{v2} especial cuidado de saber si se cumple esto así, y executéis las dichas penas en los que no la cumplieren.*

‘And we order to you, our authorities, to be especially careful in monitoring whether this [rule] is respected, and to execute the mentioned punishments to those who do not obey’
(CODEA-1757, Madrid, 1535, Textos Legislativos)

Low probability of asyndetic complementation: 5%

Summary of the results

Predicted probabilities of asyndetic complementation by context:

CODEA-1705

→ A man to the director of an orphanage: polite request to superior addressee, cluster **5-Notes**

6) **Suplico**_{v1} *a vuestra merced* ∅ **mande**_{v2} *recibir essa criatura*.

‘I beg Your Mercy to order to welcome this child’ (CODEA-1705, Madrid, 1596, Notas y Breves)

Highest probability of asyndetic complementation: 90%

Discussion: Document clusters

- Cluster **3-polite requests** and **5-notes** mostly favor \emptyset
- They represent Discourse Traditions that
 - are characterized by a high share of polite forms of address
 - contain a lot of requests
 - are addressed to superior addressees

Discussion: Addressee's status

- Asyndetic complementation appropriate especially to address people with a higher social status → elegant feature
- Second version of *Camino de Perfección* by Teresa of Ávila (Octavio de Toledo y Huerta 2011)
 - She modifies the second version to address it to a less intimate, more prestigious public
 - Among other stylistic corrections, she eliminates a lot of *que* linkers

“the omission, at least with some main verbs and with contiguous predicates, was considered as an elegant feature” (2011: 13, translation mine)

Discussion: Verb class

- Mazzola, Cornillie & Rosemeyer (*submitted*) on language-internal factors
asyndetic construction favored by the typical features of a **manipulation schema** → syntactic configuration typical of verbs of requests AND command (like *pedir, mandar, ordenar, suplicar etc...*)
- Verbs of request like *suplicar, rogar* ('to beg') → mitigation of a directive speech act (cf. Iglesias Recuero 2016): speakers in a position of inferiority compared to the addressee
- Mitigated directive speech acts → suitable to address people with a higher social status and perform "polite" requests
- New pragmatic dimension: not ANY kind of manipulation verbs, but especially those which express mitigated requests

Conclusions

- Semantic factor of verb class is a powerful predictor of the alternation between *que* and *zero*
- Asyndetic complementation is a stylistically marked variant
 - ✓ marker of the language of communicative distance (formal)
 - ✓ typical of Discourse Traditions used to perform polite requests addressed to prestigious addressees

Conclusions

- Vector-based model → suitable to reveal Discourse Traditions in large corpora?
- Multidimensional categorization: Word frequency and cosine similarities (document clusters), types of verbs, textual genre
 - The variable of document clusters has proved to be an excellent predictor of the alternation between syndetic and asyndetic complement clauses.

→ Future research: explore document clusters and their syntactic markers diachronically
